Rolleiflex

Innovative video tripod mount that allows for completely new positions and movements

- Rolleiflex hipjib is more than just a stabilizer for your camera. It creates many new possibilities for movement while remaining fast, flexible and uncomplicated. Once you have buckled on Rolleiflex hipjib, your own creativity is your limit.
- Rolleiflex hipjib requires no maintenance and is easy to clean.
- Suited for vertical movements from high above one's head to just above the ground as well as wide panning shots into all directions, allowing spontaneous flexibility of camera movement.
- Stability comparable to a shoulder support. The weight of the camera and tripod is being offset by the belt.
- For extreme camera angles, daring perspectives or simply the ability to film above a crowd or an obstacle.
- Rotations, wide swings, filming yourself – there is no limit to your creativity. No other tool of this size, weight and price gives you so many options.
- All that you need (not included in the delivery) is a tripod or monopod with a video head and a 20 to 35 mm foot diameter. For additional image control, a small monitor can be attached at eye level on the tripod/monopod.
